WAXING RECOMMENDATIONS FOR JUNIOR SKI RACING

Before you start

First, prepare the skis with a base wax that is appropriate for the weather conditions.

1. Start with **Base paraffin # 491**
2. Wax once or several times with **Rex Racing Blue #423**
3. Wax a hard "base" with either medium fluor **Racing Fluor Graphite # 406** (for powder snow) or **pink Transformé #405** (artificial, icy or spring conditions)

It is recommended that this be done the day before the race in order to save time on race day for the final race waxing. For more information on ski preparation, see www.rex.fi.
